

## Installing the Backup Capability

To have the BrokerEDI/PC E-Mail/EDI Engine backup each communications session, the 7-Zip software must have been installed in the \EMAIL\7-Zip folder.

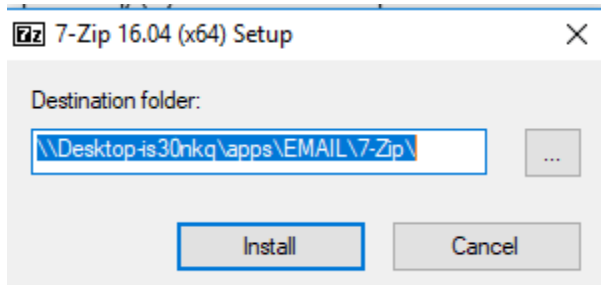

Normally this is done at the time the BrokerEDI/PC E-Mail/EDI Engine is installed. After the “Finish” button is clicked you will get the following dialog box.

The “7-Zip 16.04 (x64) Setup” defaults to installing in the “C:\Program Files\7-Zip” folder.

Click the Browse button and make the Destination folder ...\EMAIL\7-Zip

Note: The 7-Zip software was installed by running the 7-Zip installation file **7z1604-x64.exe** located in the “... \EMAIL\7-Zip” directory.

## At the End of Each Communication Session

At the end of each communication session you will see:

```
-- There no received memos to process.  
Please wait, a zipped backup of your download is being done.  
MVBACKUPDL=R:\EMAIL\BACKUPDL\Jul0818163921.7z
```

Note: zipped backups are found in the \EMAIL\BACKUPDL folder.

## Restoring a Policy or eDocs Download

To restore a Policy download or eDocs download use the program-items, shown below, to restore a session's download back into to the \EMAIL folders.

- 3 - Restore a Policy Download
- 4 - Restore an eDocs Download

Use the Power Broker "Reformat" and "Merge" commands, shown below, to again import the download.
